ROWSET LLC

SOFTWARE & DATA ENGINEERING · NAICS 541511 · UEI ZC39UHXNHCT5 · CAGE 22PH0 · SAM.gov ACTIVE

Analysis and data systems where the answer has to be defensible, not just produced.

Every delivered number traces back to the document it came from, and the same inputs give the same result on your hardware. Rowset formed in 2026. The person you brief is the person who writes the code.

CORE COMPETENCIES

- **Multi-source integration with per-value provenance.** ETL/ELT across mixed sources, entity resolution, schema and catalog management, automated data-quality checks. Where sources disagree, we publish the disagreement rather than silently picking one.
- **Deterministic analysis pipelines.** Pinned dependencies and regression suites gating every build. AI models at the edges only, never in core logic.
- **Known-answer testing.** The right answer is planted and withheld, so the analysis code can fail. Used for our own pipelines and for testing whether AI tools give the right answer and hold it under pressure.
- **Image and signal analysis.** Target detection, per-region measurement across frame series, pass/fail dispositioning.

DEMONSTRATED DELIVERY

Optical test-data pipeline (August 2026). A generator places a resolution target under a random pose and degrades the scene with modelled scattering. The analysis is never given the pose or the degradation and must recover both, then measure contrast across a 120-frame, 16-bit series and disposition pass/fail. It located the target on both cameras, returned the correct FAIL, and three separate runs produced an identical SHA-256 digest. Synthetic imagery: this shows pipeline mechanics, not a measurement method.

A curated scientific data engine in production. 5,139 flavor molecules mapped across 861 ingredients, 6,392 published threshold values each stored with its source, from 20 public and licensed sources across 44,648 papers, covered by more than 2,500 automated tests. It runs CompKitchen, a live subscription product with a public API.

WHAT WE TAKE ON AS A SUBCONTRACTOR

Discrete, bounded deliverables with complete source and build instructions verified on a clean machine: data pipeline and data-quality work inside a larger program; test or yield-data analysis that has to be right and auditable; testing of AI output. Rowset counts toward small business subcontracting goals under FAR 52.219-9.

Not a fit: prime roles on full programs, staffing at scale, on-site-heavy work, or anything requiring CUI handling at our current posture.

SUPPLIER POSTURE

CUI	None held or accepted.
CMMC	Level 1 scope (the 15 FAR 52.204-21 controls). Self-assessment not yet posted in SPRS.
ITAR	Not registered. Sole owner is a US person.
Continuity	One-person firm, mitigated contractually: complete source and build instructions, so you can rebuild without us.
Past performance	No government contracts to date. Army W911QY-26-R-FOG (Fog Tester): selected from Phase 1 straight to Phase 3; rated Technically Acceptable; awarded to another offeror.
